Minitrucks Robotics

1 Handling heavy loads

2 All-terrain mobility

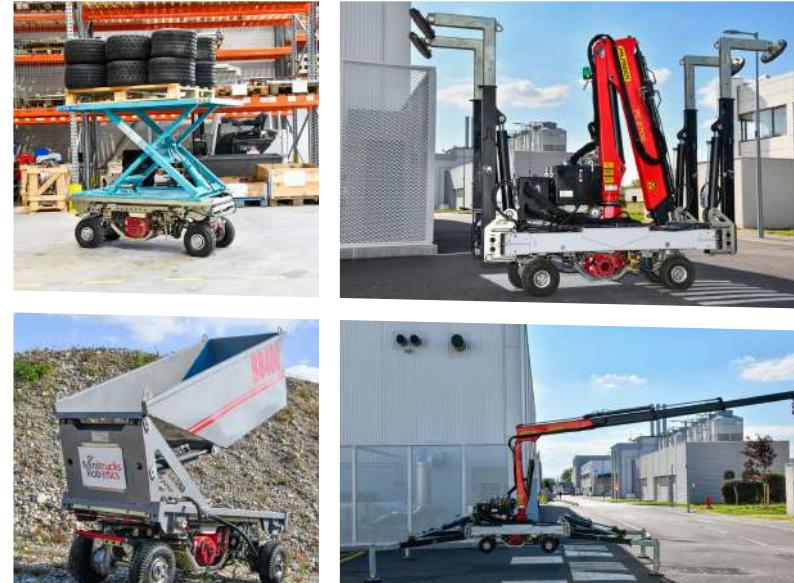

3 Less drudgery

4 Increased productivity

Discover our range of **minitrucks**, **modular**, **ultra-compact** **remotely operated** robots that combine performance and reliability. Designed for **harsh**, **narrow** or **hard-to-reach environments**. Our robots offer an alternative to traditional handling solutions, with unrivalled load capacity.

Versatile thanks to accessories such as a **spider crane**, **tipping buckets**, **lifting tables** and much more... they optimise your handling operations, even in the most demanding spaces.

We offer two types of minitruck to suit all requirements.

The **electric** range is **silent** and **powerful**, ideal for use indoors, underground and in noise-sensitive areas.

The **thermal** range, meanwhile, is **robust** and **reliable**, perfect for all types of terrain **without damaging it**. Together, they offer **versatile**, **high-performance** solutions for all conditions of use.

These two ranges can both **tow** and **lift** heavy loads.

Our Minitrucks are **designed** and **built** in **France**, come to life in our workshop in Vénissieux.

A wide range of applications

Who we are ?

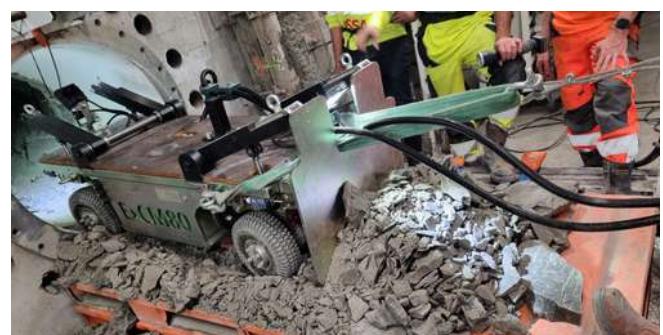

Minitrucks Robotics has unique expertise in combining **hydraulics** and **mechatronics**, and **designs**, **manufactures** and **markets**

a wide range of radio-controlled industrial robots.

With **electric** or **thermal** engines, they are designed to **reduce drudgery** and meet all the needs of **heavy handling** in **harsh**, **narrow** or **hard-to-reach environments**.
